-----  
Will the BLM reduce acreage rental rates for solar and wind projects?

The BLM has recently issued a policy to reduce rental rates for existing and new solar and wind energy development projects on public lands where acreage rents have seen dramatic increases (Section 3103 of the Energy Act of 2020) to promote responsible development in these areas.

How many solar project applications have been received by the BLM?

Seven new utility-scale solar project applications have been received by the BLM near the Esmeralda substation in Nevada.

How many acres of public lands are available for solar projects?

The updated Western Solar Plan identifies the availability of over 31 million acres of public lands across the 11 Western states for utility-scale solar project applications; however, only approximately 700,000 of those acres are anticipated to be developed by 2045 to meet projected demand.

What is the Crimson Solar Project?

The Crimson Solar Project is a \$550 million investment that has the potential to generate electricity to power approximately 87,500 homes. The BLM (Bureau of Land Management) is also currently processing other utility-scale renewable energy applications, such as the Oberon Solar Project in California.

The announcement comes in response to President Trump's Executive Order 14315, which required DOI to examine their reviews of ...

Solar and wind projects on public land in the United States will now undergo "elevated review" by US Department of Interior head Doug Burgum.

Overview Can a multi-energy complementary power generation system integrate wind and solar energy? Simulation results validated using real-world data from the southwest region of China. ...

Solar and Wind Energy Development on Public Lands Executive Summary The public lands have been an important source of the nation's energy needs for over a century, along with providing ...

The announcement comes in response to President Trump's Executive Order 14315, which required DOI to examine their reviews of solar and wind projects. The DOI, via ...

In our pursuit of a globally interconnected solar-wind system, we have focused solely on the potentials that are exploitable, accessible, and interconnectable (see &quot;Methods&quot;).

The photovoltaic panels on the top and wind turbines form a complementary wind-solar power generation system, facilitating energy production. The tabletop retains ...

Solar and wind projects on public land in the United States will now undergo "elevated review" by US Department of Interior head Doug ...

No solar projects are authorized through this planning effort; all individual proposed projects must still undergo site-specific ...

These attributes position solar power containers as a key enabler of energy democratization -- bringing clean electricity to underserved regions and critical facilities alike. ...

Achieving the national goal of 25 GWs of onshore wind, solar, and geothermal energy production comes with the need to permit additional project-specific interconnect ...

No solar projects are authorized through this planning effort; all individual proposed projects must still undergo site-specific environmental review with opportunity for ...
