What is the National EMS information system?

The National EMS Information System provides standardized EMS documentation and data collection practices to facilitate the sharing of EMS data with local, State, and national organizations. The following are the core components of NEMSIS: To collect, clean, store and share valuable information, NEMSIS continues to evolve.

What frequency does EMS radio communication take place in?

EMS radio communication takes place in the VHF low band, VHF high band, and UHF band. VHF low band is the radio frequencies from 32-50 megahertz (MHz). They are able to follow the shape of the earth allowing communication over long distances. These frequencies are more susceptible to interference from, weather, buildings, and electrical equipment.

What is EMS data management?

Oops! Something went wrong while submitting the form. Emergency Medical Services (EMS) agencies rely on standardized data collection to improve patient care and operational efficiency. One crucial standard guiding EMS data management in the United States is the National Emergency Medical Services Information System (NEMSIS).

Why is communication important in EMS?

Communication in EMS is essential. Patients must be able to access the system, the system must be able to dispatch units, EMTs must have a means of communicating with medical direction and receiving facility, and EMTs must be able to communicate vital information to other personnel.
