21.9 GWh of battery energy storage systems (BESS) was installed in Europe in 2024, marking the eleventh consecutive year of record breaking-installations, and bringing ...

Our five-year outlook foresees significant BESS expansion in Europe - a sixfold increase to nearly 120 GWh by 2029, driving total capacity to 400 GWh, yet falls short of energy transition needs.

The next decade, running from 2025 through 2035, will define whether Southeast Europe becomes a flexible, renewable-anchored, price-stabilised regional power ecosystem or ...

Energy storage systems are key for balancing supply and demand, ensuring grid stability, and improving energy efficiency. By ...

Pumped hydro is the most widely used technology for energy storage in Europe and worldwide, but batteries and hydrogen have come into the spotlight over the last decade ...

Annual battery storage installations in Europe broke the 10GWh barrier for the first time in 2023 - new data reveals which markets topped the charts

In the years ahead, storage will play a decisive role in making Europe's energy system more resilient, flexible, and ultimately more affordable. The question is no longer ...

A report from Solar Power Europe urges policymakers to prioritize battery storage through an EU Energy Storage Action Plan to ensure grid flexibility, especially after the Iberian ...

Scotland is to host the three largest battery energy storage systems in Europe after an infrastructure investment
