-----

Leisure marine New bidirectional charging technology demonstrated. The project also focusses on making vessel-to-grid ...

The interlinked tiles combine solar power generation with hybrid storage technologies, enabling rapid, reliable power availability across various operational scenarios.

This landmark report rounds off the Virtual Bunkering of Electric Vessels (VBEV) project, funded by the UK Government, assessing the financial, technical, and operational ...

Renewable-powered containerized battery exchange at Suez, Panama, and Gibraltar can economically electrify shipping routes.

In bi-directional charging, the charging station and the vehicle communicate continuously via smart protocols. They exchange information about charging speed, battery charge and the ...

Offshore charging stations have emerged as an innovative solution, despite increased investment and extended voyage durations. Here we develop a route-specific model ...

The interlinked tiles combine solar power generation with hybrid storage technologies, enabling rapid, reliable power availability across ...

This paper will review several studies and applications of solar energy as part of ship power system, and analyze the contributions in supporting reduction of carbon emissions.

Leisure marine New bidirectional charging technology demonstrated. The project also focusses on making

vessel-to-grid technology affordable and efficient.

According to the study's results, integrated solar PV systems could reduce crew workload, enhance safety, increase ship energy range, and influence the design of new types ...

In this review, electric and hybrid marine vessels are discussed, including past applications and trend demonstrations. This paper systematically analyzes maritime vessels" ...

This landmark report rounds off the Virtual Bunkering of Electric Vessels (VBEV) project, funded by the UK Government, ...
