Does energy storage revenue affect the operation of new energy stations?

The energy storage revenue has a significant impact on the operation of new energy stations. In this paper, an optimization method for energy storage is proposed to solve the energy storage configuration problem in new energy stations throughout battery entire life cycle.

How can energy storage improve the operation of new energy stations?

The configuration of energy storage in new energy stations can effectively improve the operational efficiency of new energy stations, promote the consumption of new energy, and ensure the normal and stable operation of new energy stations. Currently, research on energy storage is also a hot topic [18, 19, 20, 21, 22, 23].

How to optimize the return on energy storage investment?

By constructing the revenue model and cost model of the energy storage system in new energy stations, an objective function considering the entire battery life cycle is established with the goal of maximizing the return on energy storage investment. The improved gray wolf optimization algorithm is used to solve the objective function.

How energy storage system model is related to new energy stations?

The establishment of an energy storage system model is related to the revenue of new energy stations. This paper starts from the energy storage revenue model and energy storage cost model, and refines the energy storage system model.
