-----

To improve the operating state of energy storage, a shared energy storage operation model based on the sharing economy concept has been developed.

Firstly, this paper constructs the mathematical models of related equipment in IES, electric vehicles (EVs), and the uncertainty of renewable energy output. Secondly, a multi ...

This model optimizes the coordination between photovoltaic generation, energy storage, and charging operations, utilizing intelligent scheduling to maximize energy utilization.

The objective of this paper is to review the latest centralized, decentralized, multi-agent, model predictive, cooperative, and competitive control strategies to control and coordinate the ...

Simulation and case analysis show that the algorithm can stably achieve optimized configuration, stable frequency regulation, and reduce carbon emissions of the energy storage ...

To unlock the scheduling potential of EVs, this paper proposes a source-load-storage cooperative low-carbon scheduling strategy considering V2G aggregators.

The subsequent sections of this paper will delve into the mathematical formulation of this model, the specific allocation mechanisms derived from cooperative game theory, and a ...

This paper presents a novel distributed cooperative control scheme for multiple energy storage units in DC microgrids, aimed at achieving SoC balancing and effective power ...

To address these issues, this paper proposes a cooperative operation strategy for MMG and electric vehicle

charging station (EVCS) considering the SES characteristics of ...

To address these challenges, researchers have explored various operational strategies, focusing on individual and community-based approaches, as well as advanced ...
