How can renewables help improve Colombia's energy access?

Extensive renewables potential in the La Guajira region should help advance rural electrification and close the energy access gap. Concentrated in the northern regions, which has a 50 gigawatt (GW) offshore wind potential, renewables can also provide the clean energy needed to jump-start Colombia's hydrogen production.

How does the IEA support Colombia's energy transition?

The IEA supports Colombia's agenda for a just energy transition. Experience from the IEA's Global Commission on People-Centred Transitions provides useful learnings for the government of Colombia, helping to boost local economic benefits and the transition to clean energy and new job opportunities.

What is Ecopetrol doing in Colombia?

Colombia's national oil company, Ecopetrol (Empresa Colombiana de Petroleos), is supporting the shift to low-carbon energy with investment plans for clean energy technology.

How much hydrogen will Colombia produce in 2021?

In 2021, Colombia's Ministry of Mines and Energy presented its Hydrogen Roadmap. Its stated goals were to reach between 1 and 3GW of electrolysis capacity in 2030 and produce 50 kilotonnes of blue hydrogen from new methane steam reforming plants and the capture and storage of carbon in existing facilities.

Colombian Technology Catalogue for Power Generation and Storage Technologies 2025. This technology catalogue is developed using best available data at the time of publication. The ...

Thus, the aim of this paper is to analyse the techno-economic impact of large-scale electricity energy storage and interconnections in the integration of intermittent renewable energy by ...

Colombia's hydropower has low runoff storage capacity but good flexibility for balancing higher shares of variable renewables. There is high interannual variability from extreme weather ...

Colombia's energy transition is entering a new and decisive stage. While the country continues to expand its

renewable energy portfolio, especially in solar and wind, its ...

Colombia's hydropower has low runoff storage capacity but good flexibility for balancing higher shares of variable renewables. There is high interannual ...

Using a dynamic and regionally disaggregated simulation model, this study examines whether Colombia could achieve a zero-carbon electricity supply by 2050.

Incorporating new renewable projects, especially solar, into the matrix can take advantage of Colombia's naturally high radiation, reduce reliance on hydropower in the overall ...

A new regulatory proposal from the Colombian government outlines the technical and commercial rules for energy storage assets. The framework targets both the national grid ...

By diversifying and boosting nuclear and solar capacities, Colombia can secure its energy future and reduce its reliance on fossil fuels, contributing to the fight against climate change and ...

But here's the kicker: this South American gem is quietly brewing something far more electrifying in its Andean highlands - a new energy storage revolution that could rewrite ...

Colombia's energy transition process is underway. Former President Ivan Duque set a goal to increase non-conventional renewable energy installed capacity from one percent ...
