-----  
What infrastructure do you need for a 5G build-out?

Our vast infrastructure, which includes lighting, transmission towers, telecom towers and land lease for build-to-suit, provides the necessary structures to accelerate your company's 5G build-out and wireless network reconfiguration.

Who is Georgia Power?

Georgia Power is at the forefront of helping communications service providers with their expansion network efforts across the state.

What is the Georgia grid investment program?

Statewide. Our Grid Investment Program is a multi-year initiative to enhance service and reliability in communities across Georgia. Installing smart line devices, adding connections, relocating or strengthening or undergrounding lines, replacing transmission lines and infrastructure, and improving substations. Statewide.

Does Georgia Power have a substation?

Georgia Power has maintained a substation on this site for decades, providing electricity to numerous residential, commercial, industrial, and public customers in the area. Rebuilding and expanding the existing electrical substation, high-voltage transmission lines, and low voltage distribution circuits. Burke, Jefferson, Warren and McDuffie.

Explore the various grid projects undertaken by Georgia Power to strengthen the energy infrastructure and improve customer satisfaction.

GPC's Distributed Generation Interconnection Construction Guidelines highlight the requirements all sites must meet for construction and long-term access of the interconnection facilities.

The goal of this document is to demonstrate the foundational dependencies of communication technology to support grid operations while highlighting the need for a systematic approach for ...

Let's explore how solar energy is reshaping the way we power our communication networks and how it can make these stations ...

In February 2024, Georgia Power installed its first grid-connected BESS, the Mossy Branch Energy Facility, a 65 MW system on a couple of acres of rural countryside in Talbot County, ...

Let's explore how solar energy is reshaping the way we power our communication networks and how it can make these stations greener, smarter, and more self-sufficient.

Accelerating the 4G & 5G build-out, fiber and wireless network reconfiguration in Georgia through joint use of light poles, transmission towers and land.

The project involved the installation of 15 SmartValves (each device is 10 MVar) on the Leeds-Hurley Avenue circuit in 2023, enabling the system operator to control power flows ...

A shipping container solar system is a modular, portable power station built inside a standard steel container. A Higher Wire system ...

A shipping container solar system is a modular, portable power station built inside a standard steel container. A Higher Wire system includes solar panels, a lithium iron phosphate ...

Accelerating the 4G & 5G build-out, fiber and wireless network reconfiguration in Georgia through joint use of light poles, transmission ...

In short, you can indeed run power to a container - either by extending a line from the grid or by turning the container itself into a mini power station using solar panels.
