Urban centers adopting BIPV and eco-friendly infrastructure developments further bolster regional demand, positioning Germany as a key innovator in solar glass applications.

We take on the planning and complete automation of thin-film solar production systems. The focus is on high-precision and gentle handling of the sensitive substrates.

One challenge for the glass industry lies in replacing fossil fuels with renewable alternatives. Here, it must be clarified whether and in which cases hydrogen or green electricity can be used.

The glass manufacturing industry in Germany's southern Thuringia and northern Bavaria is to be given support in converting its ...

Using a life cycle analysis (LCA), the research team compared the CO2 footprint of monocrystalline solar modules ...

Using a life cycle analysis (LCA), the research team compared the CO2 footprint of monocrystalline solar modules manufactured in Germany, Europe and China.

Recent trends in the solar tempered glass market include the development of ultra-thin solar glass and the use of advanced coatings to enhance the efficiency of solar panels.

Since 1996 LAMBERTS is the first and only cast glass company in the world to manufacture all glass types using an oxygen-fired melting furnace which is the most ecologically sustainable ...
