-----

Far from being a sun-drenched country, Germany boasts one of the world's highest solar power outputs. The country triggered the large-scale launch of the technology ...

The strongest net electricity producer was wind power, followed by photovoltaics, which increased its production by 21 percent and thus overtook lignite for the first time.

Since 2004 solar power in Germany has been growing considerably due to the country's feed-in tariffs for renewable energy, which were introduced by the German Renewable Energy ...

The decarbonization of the energy system is evident, with carbon dioxide emissions from German electricity generation 58% lower than in 1990. The complete phase ...

Solar power on the up in Germany Solar power in Germany generated 18% of domestic electricity production in 2025, up up from 14% in 2024, the German Solar Industry ...

Photonics World Wind and solar lead German public power generation in 2025 - for first time 05 Jan 2026 Renewables accounted for 56% of total; PV up 21% over 2024 has ...

In Germany, solar photovoltaic modules are certified according to European Norm (EN) standards. Manufacturers must comply with the "safety class II" norms that certify the ...

Solar power covers 18 percent of Germany's electricity consumption For the first time, photovoltaics overtakes two fossil energy sources in terms of electricity production. ...

Total net electricity generation includes, in addition to public net electricity generation, solar self-consumption and self-generation by industrial and commercial companies. This is mainly ...

Germany installed 16.2GW of solar PV in 2025, according to an analysis by the Fraunhofer ISE based on the energy-charts data platform.
