Specializing in renewable energy storage since 2000, we deliver turnkey power solutions for extreme environments. Our patented cold-weather UPS technology has been deployed in 15+ ...

The project is in planning stages and is controversial in Iceland due to fears of increased domestic electricity prices as well as environmental damage ...

Our static uninterruptible power supply (UPS) systems comply with the VFI- SS-11 classification according to IEC 62040-3. With their robust industrial design, they support a secure consumer ...

Over 80% of electricity in Iceland is generated in hydroelectric power stations. The hydroelectric power stations, historically all run by Landsvirkjun, are central to the existence of Iceland as an ...

Data and information about power plants in Iceland plotted on an interactive map.

Discover how Iceland leverages geothermal and hydro resources to build a resilient power grid. This article explores the unique uninterruptible power supply (UPS) strategies that keep ...

All power stations larger than 1 MW must be connected to the national grid, but many owners of smaller stations feed electricity into the grid for sale.

Located in the northeast of Iceland, the Power Station was built in the crater of the Krafla volcano. It was first brought online in 1978. Due to need of modernization, the plant was refurbished, ...

Reykjavík saw its first hydropower plant set up in 1921 and Akureyri in 1922. With these plants, the electricity market in Iceland was created.
