Do solar panels need an inverter?

Without an inverter, the energy generated by your solar panels would be completely useless for your home. As the saying goes, "when installing solar panels, there is no power until you connect to the inverter." Not all inverters are created equal. The type you choose will fundamentally impact your system's performance, cost, and future-readiness.

How do solar panels connect to an inverter?

Solar Panels to Inverter: Your panels are wired together and connect to the DC input of your inverter. **Battery to Inverter (Hybrid Systems Only):** For hybrid systems, your battery bank also connects to the inverter's dedicated DC battery terminals.

How does a solar inverter work?

Distribution: As alternating current, the solar power can then be safely used within a home's electrical system, stored in a battery reserve, or shared with the utility energy grid. In essence, the inverter acts as the heart of a solar energy system, pumping generated electricity wherever it needs to go.

What is a solar inverter?

A solar inverter is a critical aspect of most photovoltaic (PV) power systems, in which energy from direct sunlight is harnessed by solar panels and transformed into usable electricity.
