Developers added 12 gigawatts (GW) of new utility-scale solar electric generating capacity in the United States during the first half of 2025, and they plan to add another 21 GW ...

The purpose of this research is to determine the optimal locations for solar panel installation by analyzing energy consumption and solar output of potential using ArcGIS.

This page describes the importance of assessing a potential site for a renewable electricity project including the site's technical, economic, policy, and other variables.

The Future of Solar Energy considers only the two widely recognized classes of technologies for converting solar energy into electricity -- photovoltaics (PV) and concentrated solar power ...

The Major Solar Projects List is a database of all ground-mounted solar projects, 1 MW and above, that are either operating, under construction or under development.

One 12 MW solar installation has so far resulted from five years of work under New York State's Build-Ready program, which was created by a 2020 state law, the program ...

New technologies like solar panels and energy storage systems are transforming how we harness the power of the sun. Challenges like cost and infrastructure are significant ...

Discover what matters most in renewable energy site selection - from grid access to zoning - and how we drive smarter project development.

As the United States works toward decarbonizing the electricity system by 2035, solar capacity will need to reach one terawatt (TW), which will require more diversity of siting configurations.
