---

As America moves closer to a clean energy future, energy from intermittent sources like wind and solar must be stored for use when the wind isn't ...

When the sun doesn't shine and the wind doesn't blow, humanity still needs power. Researchers are designing new technologies, from reinvented batteries to compressed air and ...

Energy storage is essential for creating a cleaner, more efficient, and resilient electric grid, which can ultimately reduce energy costs for New Yorkers. As New York State transitions to ...

Solar and wind power are planned to develop in tandem with battery storage so excess energy can be saved ...

A new, floating pumped hydropower system aims to cut the cost of utility-scale energy storage for wind and solar farms.

Driven by compelling economics and intensifying decarbonization commitments, these renewables have transformed from supplemental sources into the backbone of new ...

This study investigates the techno economic benefits of integrating Battery Energy Storage Systems (BESS) into wind power ...

Solar and wind power are planned to develop in tandem with battery storage so excess energy can be saved while nature provides wind or sun. Battery storage is meant to ...

As America moves closer to a clean energy future, energy from intermittent sources like wind and solar must be stored for use when the wind isn't blowing and the sun isn't shining.

This study investigates the techno economic benefits of integrating Battery Energy Storage Systems (BESS) into wind power plants by developing and evaluating optimized ...

The New York Solar Energy Industries Association has recommended nine ways for the administration of New York City Mayor-elect Zohran Mamdani to speed solar and storage ...

All net new generating capacity in 2026 is forecast to be provided by renewables and batteries, according to new EIA data.
