What is the Paris Solar Farm?

The Paris Solar Farm is a 200 megawatt (MW) solar development in Kenosha County, WI. It is an opportunity to invest in the community, create jobs, and increase tax revenues while generating clean, American made energy.

How much solar power does Paris solar produce a year?

The Paris Solar farm began producing power in December 2024 and generates 200 megawatt of renewable electricity during the day. That amount is enough to supply about 55,000 homes each year. Wisconsin's first large-scale solar battery park combines solar power with storage, providing reliable clean energy day and night. (We Energies)

Will Paris solar sell the project?

Paris Solar has stated that they intend to either; sell the electrical output of the project to customers pursuant to one or more agreements, or alternatively, they will sell some or all of the project to one or more Wisconsin public utilities, with Paris Solar remaining as the builder and operator of the project.

Is Paris Solar-Battery Park a good investment?

Additionally, the Paris Solar-Battery Park is eligible for federal tax credits, which can pass on savings to residents. Recent policy changes may reduce some of those incentives in the future. Even so, pairing solar with battery storage remains one of the most effective ways to lower costs and reduce emissions.

(WGTD)---The 200 megawatt solar farm in the Town of Paris is now complete. The site began producing power last December, but the ...

In a groundbreaking move for sustainable energy, the world's largest floating and mobile solar power plant has been unveiled along the ...

We sell a container including fold-up aluminium solar wings, each made from 8 solar panels, providing 2.4kW power and wired to the pre-fitted ...
