---

On June 14 and 16, technicians installed solar panels onto NASA's Nancy Grace Roman Space Telescope, one of the final steps in assembling the observatory.

Collectively called the Solar Array Sun Shield, these panels will power and shade the observatory, enabling all the mission's observations and helping keep the instruments ...

The system includes two fixed central panels and four others that will deploy in orbit to form a complete array. These will remain Sun-facing throughout the mission, continuously supplying ...

Watch technicians installing solar panels onto NASA's Nancy Grace Roman Space Telescope. Collectively called the Solar Array Sun Shield, these panels will power and shade ...

Each panel consists of multiple solar cells that have been engineered specifically for their mission parameters. The central two panels remain stationary while deployed once in ...

The Solar Array Sun Shield is made up of six panels, each covered in solar cells. The two central panels will remain fixed to the outer barrel assembly (the observatory's outer ...

Each panel consists of multiple solar cells that have been engineered specifically for their mission parameters. The central two ...

In this photo, technicians install solar panels onto the outer portion of NASA's Nancy Grace Roman Space Telescope. Roman's inner portion is in the background just left of ...

Installing Roman solar panels is a systematic process that requires meticulous planning, precise execution, and adherence to regulatory guidelines. A thorough preparation ...

Collectively called the Solar Array Sun Shield, these panels will power and shade the observatory, enabling all the mission's observations and helping keep the instruments cool.

Installing Roman solar panels is a systematic process that requires meticulous planning, precise execution, and adherence to ...

On June 14 and 16, technicians installed solar panels onto NASA's Nancy Grace Roman Space Telescope, one of the final steps in ...
