---

In 1943, astronomer Kenneth Edgeworth hypothesized that many small, icy bodies exist in a disc in the region beyond Neptune, having condensed from widely spaced ancient material, and ...

Astrophysicists are mapping a vast, hidden structure in space that appears to guide matter and radiation along a kind of interstellar highway stretching from our solar neighborhood to distant ...

Eyes on the Solar System lets you explore the planets, their moons, asteroids, comets and the spacecraft exploring them from 1950 to 2050. Ride with the Curiosity Rover as ...

Join Bill Nye, The Science Guy, as he takes you on an inspirational audio tour of the sun, eight planets, and dwarf planet Pluto. ...

While solar eclipses happen somewhere in the world every year - total solar eclipses don't often occur in the continental U.S (the last one was in 2017). The presentation ...

Facts About Jupiter Jupiter is the largest and oldest planet in our solar system. If Jupiter was a hollow shell, 1,000 Earths could fit inside. But the "King of Planets" is no ...

NASA's real-time science encyclopedia of deep space exploration. Our scientists and far-ranging robots explore the wild frontiers of our solar system.

Revolving around the sun are eight planets. The planets are divided into two categories based on their composition, terrestrial and ...

The numbers displayed here are approximations. For more precise data, please visit JPL Solar System Dynamics

Overview Definition Formation and evolution General characteristics Sun Inner Solar System Outer Solar System Trans-Neptunian region The Solar System consists of the Sun and the objects that orbit it. The name comes from Sol, the Latin name for the Sun. It formed about 4.6 billion years ago when a dense region of a molecular cloud collapsed, creating the Sun and a protoplanetary disc from which the orbiting bodies assembled. The fusion of hydrogen into helium inside the Sun's core releases energy, which is primarily e...

Imagine entering our solar system from interstellar space. As you travel toward our Sun, you would move through three distinct regions. First you would pass countless icy worlds. Then ...
