Find out where your province and city are ranked in terms of solar energy potential. With charts and maps you will easily be able to make comparisons across Canada.

NREL's PVWatts Calculator Estimates the energy production of grid-connected photovoltaic (PV) energy systems throughout the world. It allows homeowners, small building owners, ...

Solar Potential CriteriaSizing Your Solar SystemFinancial CalculationEmissions Reduction CalculationIn determining the solar system size, the SolarTO Map estimates that one kW of solar will generate 1,150 kWh per year, based on average solar radiation in Toronto. Please note that the map suggests the maximum system size for your building, which may be more than you need to meet your electricity consumption. For a grid-tied solar system, Toronto H...See more on toronto.caPVWatts CalculatorPVWatts CalculatorNREL's PVWatts Calculator Estimates the energy production of grid-connected photovoltaic (PV) energy systems throughout the world. It allows homeowners, small building owners, ...

Understand how solar PV systems in Toronto convert sunlight into electricity, panels, efficiency factors, and basic installation considerations.

This web mapping application gives estimates of photovoltaic potential (in kWh/kWp) and of the mean daily global insolation (in MJ/m² and in kWh/m²) for any location in Canada on a 60 ...

After taking all losses into account, you can expect about 131934 kWh for every 100 kWp installed solar panels. As it is not always possible to install the solar panels at the optimum angle, we ...

It's important to consider local factors that could impact solar production at this location. Toronto experiences occasional extreme weather events such as heavy snowfall or ...
