Why is Stockholm expanding its public transportation capacity?

Stockholm is expanding its public transportation capacity to meet the increasing mobility needs arising from the growth of the population in the Swedish capital over the last years.

How does a mobile base station work?

By combining fossil-free hydrogen, fuel cells, solar panels, and batteries, this innovative solution sets a new standard for ensuring connectivity during prolonged power outages. Today, mobile base stations primarily rely on electricity from the power grid, with batteries and diesel generators providing backup.

How does a base station work?

As shown in Figure S3 each user accesses a base station, and the BS then allocates a channel to each new user when there is remaining channel capacity. If all of the channel capacity of a BS is occupied, a user cannot access this BS and must instead access another BS that is farther away.

This innovative project by Telia and PTS demonstrates the potential of hydrogen and renewable energy to enhance network ...

A single macro base station now consumes 3-5kW - triple its 4G predecessor - while network operators face unprecedented pressure to maintain uptime during grid failures.

Our study introduces a communications and power coordination planning (CPCP) model that encompasses both distributed energy resources and base stations to improve ...

The project is funded by PTS and conducted in collaboration with Telia at one of Telia's mobile base stations. The installation of the new energy source will be followed by a ...

Today, modular lithium-based energy storage systems have become the preferred solution for ensuring continuous operation, even under unstable grid or off-grid conditions.

Linxon successfully commissions the new 400 kV Hall substation near Stockholm, Sweden, enhancing grid reliability and ...

The scope of this project includes the deployment of the telecom and control system in these three new stations, along the service ...

Today, modular lithium-based energy storage systems have become the preferred solution for ensuring continuous operation, even ...

This innovative project by Telia and PTS demonstrates the potential of hydrogen and renewable energy to enhance network resilience, setting a new standard for connectivity ...

Linxon successfully commissions the new 400 kV Hall substation near Stockholm, Sweden, enhancing grid reliability and supporting modernization efforts. Discover how this ...

The scope of this project includes the deployment of the telecom and control system in these three new stations, along the service tunnels as well as in the technical spaces.

In the Stockholm region, Sweden, this challenge is especially pronounced. Reduced local electricity production combined with the development of new electricity-dependent ...
