`super()` is a special use of the `super` keyword where you call a parameterless parent constructor. In general, the `super` keyword can be used to call overridden methods, ...

As for chaining `super::super`, as I mentionned in the question, I have still to find an interesting use to that. For now, I only see it as a hack, but it was worth mentioning, if only for the differences ...

The automatic insertion of `super ()` by the compiler allows this. Enforcing `super` to appear first, enforces that constructor bodies are executed in the correct order which would ...
