What's The Difference Between DC and AC Electricity? What Is An Inverter? How Does An Inverter Work? Types of Inverters What Are Inverters like? Inverters can be very big and hefty--especially if they have built-in battery packs so they can work in a standalone way. They also generate lots of heat, which is why they have large heat sinks (metal fins) and often cooling fans as well. As you can see from our top photo, typical ones are about as big as a car battery or car battery charger; larger un... See more on explain that stuff Department of Energy Solar Integration: Inverters and Grid Services Basics This page explains what an inverter is and why it's important for solar energy generation.
