OverviewWind power capacity and productionWind energy resourcesWind farmsEconomicsSmall-scale wind powerImpact on environment and landscapePoliticsIn 2024, wind supplied over 2,494 TWh of electricity, which was 8.1% of world electricity. To help meet the Paris Agreement's goals to limit climate change, analysts say it should expand much faster than it currently is - by over 1% of electricity generation per year. Expansion of wind power is being hindered by fossil fuel subsidies
