Yes, you can reset a GFCI circuit breaker yourself, but it's important to do it safely and correctly. A GFCI, or Ground Fault Circuit Interrupter, is a crucial safety device designed to protect you from electrical shock. When a GFCI trips, it means it has detected an imbalance in the electrical current, which could indicate a dangerous situation.

What happens if a GFCI breaker is tripped?

When the main circuit breaker is tripped or turned off, it cuts power to the GFCI outlets. As a result, the GFCI won't reset until the main breaker is reset. Locating the main electrical panel, checking for a tripped breaker and then turning it back on, if necessary, can resolve this issue.
